---

If you need a reliable long term backup solution to problems with Office on your Mac the only other solution is to install Windows on Mac and install Microsoft Office 2016 on that. I deleted the keychain entries that contain something like Outlook Microsoft Exchange and deletion of your Outlook account and creating it on. Or maybe a login script may be required to call this command at the time of login for each user using a tool like the beginning. If you need a reliable long-time backup solution for Office problems on your Mac the only other solution is to install Windows on Mac and Microsoft Office 2016.

I deleted keychain entries that contain anything outlook microsoft exchange as well as deleting the outlook account and recreated. If youre an admin and want to update the computers in your organization with your existing software deployment tools you can download and deploy the update packages for each application. If you want to visit an administrator and update the computers in your organization with the existing software usage tools you can download and apply the service packs for each program.
